This User Manual is important to you. Please read it before using your projector.
EN-2

The lightning flash with arrowhead symbol within an equilateral triangle is intended to alert the user to the presence of uninsulated "dangerous voltage" within the product's enclosure that may be of sufficient magnitude to constitute a risk of electric shock.

The exclamation point within an equilateral triangle is intended to alert the user to the presence of important operating and maintenance (servicing) instructions in the literature accompanying the appliance.

WARNING
Use the attached specified power supply cord. If you use another power supply cord, it may cause interference with radio and television reception.
Use the attached RGB cable with this equipment so as to keep interference within the limit of an FCC Class B device.
This apparatus must be grounded.
DO NOT LOOK DIRECTLY INTO THE LENS WHEN THE PROJECTOR IS IN THE POWER ON MODE.

CAUTION
The attached power cord is to be used exclusively for this product. Never use it for other products.

WARNING: TO PREVENT FIRE OR SHOCK HAZARD, DO NOT EXPOSE THIS APPLIANCE TO RAIN OR MOISTURE.

CAUTION: TO PREVENT ELECTRIC SHOCK, DO NOT USE THIS (POLARIZED) PLUG WITH AN EXTENSION CORD, RECEPTACLE OR OTHER OUTLET UNLESS THE BLADES CAN BE FULLY INSERTED TO PREVENT BLADE EXPOSURE.

NOTE: SINCE THIS PROJECTOR IS PLUGGABLE EQUIPMENT, THE SOCKET-OUTLET SHALL BE INSTALLED NEAR THE EQUIPMENT AND SHALL BE EASILY ACCESSIBLE.

WARNING
Use the attached specified power supply cord. If you use another power supply cord, it may cause interference with radio and television reception.
Use the attached RGB cable with this equipment so as to keep interference within the limit of an FCC Class B device.
This apparatus must be grounded.
DO NOT LOOK DIRECTLY INTO THE LENS WHEN THE PROJECTOR IS IN THE POWER ON MODE.

CAUTION
The attached power cord is to be used exclusively for this product. Never use it for other products.

When using the projector in Europe (only for XD206U):

COMPLIANCE NOTICE
The electro-magnetic susceptibility has been chosen at a level that gains proper operation in residential areas, on business and light industrial premises and on small-scale enterprises, inside as well as outside of the buildings. All places of operation are characterized by their connection to the public low voltage power supply system.

WARNING
Use the attached RGB cable with this equipment so as to keep interference within the limits of an EN55022 Class B device.
Please follow WARNING instructions.

Note: This symbol mark is for EU countries only.
This symbol mark is according to the directive 2002/96/EC Article 10 Information for users and Annex IV.

Your MITSUBISHI ELECTRIC product is designed and manufactured with high quality materials and components which can be recycled and reused.
This symbol means that electrical and electronic equipment, at their end-of-life, should be disposed of separately from your household waste.
Please, dispose of this equipment at your local community waste collection/recycling centre.
In the European Union there are separate collection systems for used electrical and electronic product.
Please, help us to conserve the environment we live in!

DLP™, Digital Micromirror Device and DMD are all trademarks of Texas Instruments.
Other brand or product names are trademarks or registered trademarks of their respective holders.

Declaration of Conformity
Model Number : XD206U / XD206U-G
Trade Name : MITSUBISHI ELECTRIC
Responsible party : Mitsubishi Digital Electronics America, Inc.
9351 Jeronimo Road, Irvine, CA 92618 U.S.A
Telephone number : +1-(949) 465-6000

This device complies with Part 15 of the FCC Rules. Operation is subject to the following two conditions:
(1) this device may not cause harmful interference, and
(2) this device must accept any interference received, including interference that may cause undesired operation.
Important safeguards

Please read all these instructions regarding your projector and retain them for future reference. Follow all warnings and instructions marked on the projector.

1. Read instructions
   All the safety and operating instructions should be read before the appliance is operated.

2. Retain instructions
   The safety and operating instructions should be retained for future reference.

3. Warnings
   All warnings on the appliance and in the operating instructions should be adhered to.

4. Instructions
   All operating instructions must be followed.

5. Cleaning
   Unplug this projector from the wall outlet before cleaning it. Do not use liquid aerosol cleaners. Use a damp soft cloth for cleaning.

6. Attachments and equipment
   Never add any attachments and/or equipment without the approval of the manufacturer as such additions may result in the risk of fire, electric shock or other personal injury.

7. Water and moisture
   Do not use this projector near water or in contact with water.

8. Accessories
   Do not place this projector on an unstable cart, stand, tripod, bracket, or table. Use only with a cart, stand, tripod bracket, or table recommended by the manufacturer or sold with the projector. Any mounting of the appliance should follow the manufacturer's instructions and should use a mounting accessory recommended by the manufacturer.

9. Overloading
   Do not overload wall outlets and extension cords as this can result in a fire or electric shock.

10. Objects and liquids
    Never push objects of any kind through openings of this projector as they may touch dangerous voltage points or short-out parts that could result in a fire or electric shock. Never spill liquid of any kind on the projector.

11. Servicing
    Do not attempt to service this projector yourself. Refer all servicing to qualified service personnel.

12. Damage requiring service
    Unplug this projector from the wall outlet and refer servicing to qualified service personnel under the following conditions:
    (a) If the power-supply cord or plug is damaged.
    (b) If liquid has been spilled, or objects have fallen into the projector.
    (c) If the projector does not operate normally after you follow the operating instructions. Adjust only those controls that are covered by the operating instructions. An improper adjustment of other controls may result in damage and may often require extensive work by a qualified technician to restore the projector to its normal operation.
    (d) If the projector has been exposed to rain or water.
    (e) If the projector has been dropped or the cabinet has been damaged.
    (f) If the projector exhibit a distinct change in performance - this indicates a need for service.

13. Replacement parts
    When replacement parts are required, be sure that the service technician has used replacement parts specified by the manufacturer or parts having the same characteristics as the original part. Unauthorized substitutions may result in fire, electric shock or other hazards.

14. Safety check
    Upon completion of any service or repair to this projector, ask the service technician to perform safety checks determining that the projector is in a safe operating condition.
WARNING:
Unplug immediately if there is something wrong with your projector.
Do not operate if smoke, strange noise or odor comes out of your projector. It may cause fire or electric shock. In this case, unplug immediately and contact your dealer.

Never remove the cabinet.
This projector contains high voltage circuitry. An inadvertent contact may result in an electric shock. Except as specifically explained in User Manual, do not attempt to service this product by yourself.
Please contact your dealer when you want to fix, adjust, or inspect the projector.

Do not modify the projector.
It can lead to fire or electric shock.

Do not keep using the damaged projector.
If the projector is dropped and the cabinet is damaged, unplug the projector and contact your dealer for inspection. It may lead to fire if you keep using the damaged projector.

Do not face the projection lens to the sun.
It can lead to fire.

Use correct voltage.
If you use incorrect voltage, it can lead to fire.

Do not place the projector on uneven surface.
Place the projector on a level and stable surface only.

Do not look into the lens when the projector is operating.
It may hurt your eyes. Never let children look into the lens when the projector is on.

Do not unplug the power cord during operation.
It can lead to lamp breakage, fire, electric shock or other trouble. Wait for the fan to stop before unplugging the power cord.

Do not touch the air outlet grilles and bottom plate.
Do not touch them or put other equipment close to the air outlet grilles because they become hot during operation. The heated air outlet grilles and bottom plate may cause injury or damage to other equipment. Also, do not put the projector on a desk that is easily affected by heat.

Do not look into the air outlet grilles when projector is operating.
Heat, dust, etc. may blow out of them and hurt your eyes.

Do not block the air inlet and outlet grilles.
If they are blocked, heat may be generated inside the projector, causing deterioration in the projector quality and fire.

Do not use flammable solvents (benzene, thinner, etc.) and flammable aerosols near the projector.
Flammable substances may ignite causing fire or breakdown because the temperature inside the projector rises very high while the lamp is illuminating.

Place of installation
For safety’s sake, do not use the projector at any place subjected to high temperature and high humidity. Please maintain an operating temperature, humidity, and altitude as specified below.
- Operating temperature: between +41°F (+5°C) and +95°F (+35°C)
- Operating humidity: between 30% and 90%
- Never put any heat-producing device under the projector to prevent the projector from being overheated.
- Do not install the projector at a place that is unstable or subject to vibration.
- Do not install the projector near any equipment that produces a strong magnetic field. Also refrain from installing the projector near any cable carrying a large amount of current.
- Place the projector on a solid, vibration-free surface. Otherwise it may fall, causing serious injury or damage.
- Slanting the projector more than ±10° (right and left) or ±15° (front and rear) may cause trouble or explosion of the lamp.
- Do not place the projector near air-conditioning unit or heater to avoid the air outlet and inlet grilles from being exposed to hot air.

COMPLIANCE NOTICE OF FCC
This equipment has been tested and found to comply with the limits for a Class B digital device, pursuant to Part 15 of the FCC Rules. These limits are designed to provide reasonable protection against harmful interference in a residential installation. This equipment generates, uses and can radiate radio frequency energy and, if not installed and used in accordance with the instructions, may cause harmful interference to radio communications. However, there is no guarantee that interference will not occur in a particular installation. If this equipment does cause harmful interference to radio or television reception, which can be determined by turning the equipment off and on, the user is encouraged to try to correct the interference by one or more of the following measures:
- Reorient or relocate the receiving antenna.
- Increase the separation between the equipment and receiver.
- Connect the equipment into an outlet on a circuit different from that to which the receiver is connected.
- Consult the dealer or an experienced Radio / TV technician for help.
Changes or modifications not expressly approved by Mitsubishi could void the user’s authority to operate this equipment.

COMPLIANCE NOTICE OF INDUSTRY CANADA
This Class B digital apparatus complies with Canadian ICES-003.
Overview

Control panel

Terminal board
Caution:
Do not replace the lamp immediately after using the projector because the lamp would be extremely hot and it may cause burns.

Remote control

1 ON button
2 STILL button
3 AUTO POSITION button
4 ENTER button
5 MENU button
6 KEYSTONE button
7 +, - (VOLUME) buttons
8 VIDEO, S-VIDEO button
9 COMPUTER button
10 16 : 9 button
11 Direction buttons
12 PAGE UP / DOWN button
13 OFF button
14 MUTE button (Audio/Video)

•The + and - buttons are used in the KEYSTONE adjustment in addition to the volume control.

This model does not have this function.
Remote control

Battery installation
Use two AA (R6) size batteries.

1. Remove the back cover of the remote control by pushing the battery compartment door in the direction of the arrow.
2. Load the batteries making sure that they are positioned correctly (+ to +, and - to -).
   - Load the batteries from - spring side, and make sure to set them tightly.
3. Replace the back cover.

Caution:
- Use of a battery of wrong type may cause explosion.
- Only Carbon-Zinc or Alkaline-Manganese Dioxide type batteries should be used.
- Dispose of used batteries according to your local regulations.
- Batteries may explode if misused. Do not recharge, disassemble, or dispose of in fire.
- Be sure to handle the battery according to the instructions.
- Load the battery with its positive (+) and negative (-) sides correctly oriented as indicated on the remote control.
- Keep batteries out of reach of children and pets.
- Remove the battery, if the remote control is not used for a long time.
- Do not combine a new battery with an old one.
- If the solution of batteries comes in contact with your skin or clothes, rinse with water. If the solution comes in contact with your eyes, rinse them with water and then consult your doctor.

Operation range (of the remote control)
The maximum operation distance of the remote control is about 10 m (or about 32 feet) when the remote control is pointed at the remote control sensor of the projector. When the remote control is pointed to the screen, the distance from the remote control to the projector via the screen should be 5 m or less. However, the operation distance varies depending on the type of the screen used.

Reception angle (vertical)

Important:
- Do not expose the remote control sensor to direct sunlight or fluorescent. Keep a distance at least 2 m (6.5 feet) between the remote control sensor and the fluorescent light to ensure correct operation of the remote control.
- Inverted fluorescent light, if located near the projector, may interfere the remote control.
- When you use the remote control too close to the remote control sensor, the remote control may not work correctly.
Installation

Layout of the projector
Image size varies depending on the distance between the screen and the projector.

Front projection

The above figures are approximate and may be slightly different from the actual measurements.

Front projection, ceiling mounting
For ceiling mounting, you need the ceiling mount kit designed for this projector. Ask a specialist for installation. For details, consult your dealer.

Caution:
- Placing the projector directly on a carpet impairs ventilation by the fans, causing damage or failure. Put a hard board under the projector to facilitate ventilation.
- Place the projector at least 50 cm (or 20 inch) away from the wall to prevent the air inlet grille and the air outlet grilles that emit hot air from being blocked.
- Do not use the projector in the following locations and manners, which may cause fire or electric shock.
  - In a dusty or humid place.
  - In a sideways or upside-down position.
  - Near a heater.
  - In an oily, smoky, or damp place such as a kitchen.
  - In direct sunlight.
  - Where the temperature rises high, such as in a closed car.
  - Where the temperature is lower than +41°F (or +5°C) or higher than +95°F (or +35°C).
- If you move the zoom, the screen will be out of focus. If this is the case, adjust the focus again.

Important:
- Do not apply force to the lens, because the lens may be damaged.
- We don’t recommend using the projector at an altitude of 1500 meters or higher. Use at an altitude of 1500 meters or higher may affect the projector’s life.

Rear projection
Ask a specialist for installation. For details, consult your dealer.

Caution:
- For rear projection, set IMAGE REVERSE in the INSTALLATION menu to MIRROR. See page 16.
Basic connections

This projector can be connected with various devices such as a VCR, video camera, videodisc player, and personal computer that have analog RGB output connectors.

Important:
- Make sure that the connected device is turned off before starting connection.
- Plug in the power cords of the projector and the connected devices firmly. When unplugging, hold and pull the plug. Do not pull the cord.
- When the projector and the connected devices are located too close to each other, the projected image may be affected by their interference.
- See the owner’s guide of each device for details about its connections.

Projector + AV device

![Diagram of Projector + AV device]

Important:
- Match the colors of the video and audio plugs on the Audio cable with those of the terminals.
- Speaker output is mono.

Projector + DVD player or HDTV decoder

Some DVD players have an output connector for 3-line fitting (Y, Cb, Cr). When connecting such DVD player with this projector, use the COMPUTER IN terminal.

![Diagram of Projector + DVD player or HDTV decoder]

Important:
- The terminal's names Y, Pb, and Pr are given as examples of when a HDTV decoder is connected.
- The terminal's names vary depending on the connected devices.
- Use a Mini D-SUB 15-pin - BNC conversion cable for connection.
- Image may not be projected correctly with some DVD players.
- When connecting a HDTV decoder having RGB output terminals, set COMPUTER INPUT to RGB in the SIGNAL menu.
- Speaker output is mono.
- When the audio cable is connected to the AUDIO OUT terminal, the speaker output is muted.
Projector + Computer
For computer with Mini D-SUB

Important:
- When you use a longer RGB cable instead of the provided cable, the image may not be projected correctly.
- Some computers require additional connectors or analog RGB output adapters to be connected with this projector. Contact your dealer for further information.
- This projector uses stereo pin jack for its audio input. Check the type of the audio output terminal of the connected computer and prepare a proper cable for connection. Some computers don't have the audio output terminal.
- Speaker output is mono.
- When the audio cable is connected to the AUDIO OUT terminal, the speaker output is muted.
- MONITOR OUT terminal is not available for SYNC on G (Green) signal.

For Macintosh
- If your Macintosh has no video port, a monitor output adapter is required. Contact your dealer for further information.
- Some Macintoshes require a MAC adapter for the RGB cable for connection with this projector. Contact your dealer for further information.

For monitor connection
- Connect the RGB cable from the monitor to the MONITOR OUT terminal of the projector.
Preparation

Preparation for projection
1. Attach the provided power cord to the projector.
2. Plug the power cord in the wall outlet.
3. Remove the lens cap.

Warning:
• Do not look into the lens directly when the projector is on.
• The lens cap is for protecting the lens. If you leave the lens cap on the lens with the projector turned on, it may be deformed because of heat build-up. Remove the lens cap when you turn on the projector.
• One of power cords for the U.S., Europe and U.K. is provided appropriately.
• This projector uses the power plug of three-pin grounding type. Do not remove the grounding pin from the power plug. If the power plug doesn’t fit your wall outlet, ask an electrician to change the wall outlet.
• In case that the power cord for the U.S. is provided with this projector, never connect this cord to any outlet or power supply using other voltages or frequencies than rated. If you want to use a power supply using other voltage than rated, prepare an appropriate power cord separately.
• Use 100-240 V AC 50/60 Hz to prevent fire or electric shock.
• Do not place any objects on the power cord or do not place the projector near heat sources to prevent damage to the power cord. If the power cord should be damaged, contact your dealer for replacement because it may cause fire or electric shock.

Caution:
• Plug in the power cord firmly. When unplugging, hold and pull the power plug, not the power cord.
• Do not plug in or out the power cord with your hand wet. It may cause electric shock.

Adjustment of the projection angle
For the best projection, project images on a flat screen installed at 90 degrees to the floor. If necessary, tilt the projector using the two adjustment feet on the bottom of the projector.

1. Tilt up the project to the appropriate angle.
2. Press the foot adjustment buttons next to the adjustment feet, and the adjustment feet will come out.
3. Release the buttons to lock the adjustment feet to that position.
4. Rotate the adjustment feet for fine adjustment.

After using the projector:
5. Put the adjustment feet back into the projector by pressing the foot adjustment buttons.

Important:
• If necessary, rotate the adjustment feet (front) for fine adjustment.
• Install the screen on a flat wall at 90 degrees to the floor.
• Slanting the projector more than ±10° (right and left) or ±15° (front and rear) may cause trouble or explosion of the lamp. You can tilt the projector up to 7 degrees using the adjustment feet only.
• Images may not be projected in a shape of a regular rectangle or with its aspect ratio 4:3, depending on the installation conditions of the projector and the screen.
• To correct vertical keystone distortion, press the KEYSTONE button on the projector or the remote control to display KEYSTONE, and adjust the image by pressing the ▲, ▼ button (or VOLUME +, - button on the remote control).

In the following cases:

- When the keystone adjustment is carried out, the adjustment value is indicated. Note that this value doesn’t mean a projection angle.
- The allowable range of the adjustment value in the keystone adjustment varies depending on the installation conditions.
- When the keystone adjustment takes effect, the resolution decreases. In addition, stripes may appear or straight lines may bend in images with complicated patterns. They are not due to product malfunctions.
- Noise may appear on the screen during the keystone adjustment because of the type of the video signal being projected and the setting values of the keystone adjustment. In such cases, set the keystone adjustment values in the range where the image is displayed without noise.
- When the keystone adjustment is carried out, the image may not be displayed correctly because of the type of input signal.
- The keystone adjustment doesn’t work when no signal.

EN-12
Basic operation

**Power-on**

1. Turn on the device connected to the projector first.
2. Plug the power cord in the wall outlet.
   - The POWER indicator lights up.
   - If the power cord is unplugged from the wall outlet before
   the projector is cooled down completely after use, the
   fans may start rotating when the power cord is plugged
   in and the POWER button is pressed next time.
3. Press the POWER button on the control panel or the ON button
   on the remote control.
   - It may take about one minute for the lamp to light up.
   - The lamp occasionally fails to light up. In this case, wait for
   the re-try. Still fails after retry, try to light the lamp again. If
   the temperature of lamp is high, wait a few minutes and try to
   light the lamp again.
   - After the POWER button is pressed, the image may flicker
   before the lamp becomes stable. This is not a product mal-
   function.
   - Regardless of the setting of LAMP MODE in the INSTALLA-
   TION menu, the STANDARD lamp mode is activated by
   default whenever the projector is turned on.
4. Adjust the focus by turning the focus ring.
5. Choose your desired external input source using the COM-
   PUTER or VIDEO button.
   - The input source is switched from VIDEO to COMPUTER at
   the press of the COMPUTER button on the control panel.
   - The input source is switched between VIDEO and S-VIDEO
   at every press of the VIDEO button on the control panel.
   - If you use a remote controller, press the VIDEO or S-VIDEO
   button to directly switch to VIDEO or S-VIDEO.
   - The projector automatically selects the appropriate signal
   format. The selected signal format is displayed on the
   screen.
   - To avoid permanently imprinting a fixed image onto your pro-
   jector, please do not display the same stationary images for
   long period.
6. Adjust the image size by turning the zoom ring.
   - If necessary, adjust the focus and zoom again.
   - If you move the zoom, the screen will be out of focus. If this is
   the case, adjust the focus again.

</tbody>
</table>

Important:
- Do not cover the lens with the lens cap while the lamp is on.
- The projector starts warming up when the POWER button is
  pressed. During the warm-up process, images may appear dark
  and no commands are accepted. The projector cannot be turned
  off within 60 seconds after the lamp is turned on.
- By blinking red, the STATUS indicator indicates that the lamp
  should be replaced soon. Replace the lamp when the STATUS
  indicator blinks red. (See page 23 and 26.)
- Images may not be projected with good quality in an extremely hot
  or cold environment. (This is not a product malfunction.)
4. Adjust the focus by turning the focus ring.
**Basic operation (continued)**

**Power-off**
Use the following procedure to turn off the projector.

1. Press the POWER button on the control panel or the OFF button on the remote control.
   - The message "POWER OFF? YES : PRESS AGAIN" appears on the screen.
   - To cancel, press any button except the POWER button. (Some buttons on the remote control don't function for cancel.)
2. Press the POWER button on the control panel or the OFF button on the remote control within 10 seconds again.
   - The lamp will go out and the STATUS indicator will start blinking.
   - Though the lamp goes out at this second press of the POWER button (or STANDBY button), the air outlet fans continue operating for approx. 90 seconds to cool down the lamp. The STATUS indicator will stop blinking.
3. Unplug the power cord.
   - The POWER indicator will go out.
   - To light the lamp again, press the POWER button (or ON button). If the lamp doesn't light up immediately, repeat pressing the POWER button (or OFF button) two or three times. If it should still fail to light up, replace the lamp.

**Notice:**
- When storing the projector in the carrying case, the lens should face up.

**Instant Shut Down**
You can turn off this projector just by unplugging the power cord without pressing the POWER button.
- When Power-ON under the high temperature near the lamp after Instant Shut Down, the audio out and the cooling fan start firstly. Then the lamp will light up automatically about 90 seconds later after starting the cooling fan.
- Don't shut down the projector while the STATUS indicator is blinking after the lamp lights up because the lamp's life may be shortened.
- Don't turn the projector back on right after shutting it down because the lamp's life may be shortened. (Wait about 10 minutes before turning the projector back on.)
- Before shutting down the projector, be sure to close the menu screen. If you shut down the projector without closing the menu, the setting data of the menu may not be saved.
- If you shut down the projector while controlling the projector using the network function, the application software may fail.

**AUTO POSITION button**
When the image isn't projected in the right position with COMPUTER selected as the input source, follow the procedure below.

1. Project a bright image such as the "Recycle Bin" window on the full screen.
2. If the screen saver is running, turn it off.
3. Press the AUTO POSITION button.
   - If the image is still not in the right position, adjust the image position using the SIGNAL menu. See page 19.

**Volume from the speaker**
Press the KEYSTONE button on the remote control to switch the KEYSTONE / VOLUME adjustment. When the VOLUME control bar appears on the screen, press the VOLUME + or -button to change the volume from the speaker.

The volume control bar will appear on the screen.

- The volume control bar will disappear about 10 seconds after the VOLUME button is released.
- When a high-level audio signal, such as a DVD audio signal, is supplied to the AUDIO IN terminal, the output from the speaker may be distorted.

**AV mute**
The video and audio signals are temporarily muted when the MUTE button is pressed. To cancel muting, press the MUTE button again.

**ANAMORPHIC mode**
When playing DVD discs containing data of letterboxed image, press the 16:9 button. Exit the ANAMORPHIC mode, by pressing the 16:9 button again.

**Important:**
- When a letterboxed image is kept displayed for a long time before displaying 4:3 image, the afterimages of the black bars may appear on the 4:3 image screen. Consult your dealer in this case.

**Caution:**
- After using the projector, wait 90 seconds for the air outlet fans to stop. Then unplug the power cord from the wall outlet.
- While cooling down, the STATUS LED keeps blinking green, the POWER button won't work till it stops blinking.
- The air outlet fans will run for extra 90 seconds before starting the projector if it didn't shut down properly (unplug directly without pressing POWER button) and the temperature is too high.
- The air outlet fans rotate faster as the temperature around the projector rises.
- After shut down due to the high temperature, the Status LED is lit about 10 seconds.

**Important:**
- Do not display a still picture for a long time because the afterimages may persist on the screen.
Menu operation

Several settings can be adjusted using the menu.

Example: Auto power off time setting

1. Press the MENU button.

2. Press the ▲ or ▼ button to select INSTALLATION.

3. Press the ENTER button (or ▼ button).

4. Press the ▲ or ▼ button to select AUTO POWER OFF.

5. Press the ▼ or ► button to adjust the auto power off time.

6. Exit the menu by pressing the ▲ button several times, and then the MENU button.

Important:
- When the button doesn’t function, unplug the power cord from the wall outlet. Wait about 10 minutes, plug the power cord in, and try again.
- After selecting the items marked with [ ], press the ENTER button.
- In case of outline characters on a colored background, it means that function is not available.

*1: The value range of Horiz. and Vert. Position may be varied according to different source.
*2: Not available with certain signals.
*3: Not available when the source is PC signal.
*4: Not available when the source is non-interlaced signal.
Menu operation (continued)

1 IMAGE

CONTRAST ................................................Use to adjust the image contrast. The contrast becomes higher as the value increases.

BRIGHTNESS .............................................Use to adjust the image brightness. The image becomes brighter as the value increases.

WHITE ENHANCE ......................................Use to adjust the white level of the projected image.

COLOR TEMP ............................................Use to adjust the color temperature. See page 18.

COLOR .......................................................Use to adjust the color intensity of the image.

TINT ............................................................Use to adjust the color balance of the image. The color balance shifts to purple as the value increases and shifts to green as the value decreases. (Available only when VIDEO or S-VIDEO is chosen as the source.)

• When the TV50 (PAL, SECAM) signal is input, TINT can’t be adjusted.

SHARPNESS ..............................................Use to adjust the image sharpness. The image becomes sharp as the value increases. (Not available with certain signals.)

GAMMA MODE ..........................................When AUTO is selected, the appropriate gamma mode is automatically selected depending on the input signal. For normal use, select AUTO. Select DYNAMIC for computer sources. Select STANDARD for sport scenes and video sources. Select THEATER for film sources.

2 INSTALLATION

AUTO POWER ON .....................................When ON is chosen, the lamp is automatically lit when the power cord is plugged in the wall outlet. When changing ON/OFF, this setting is saved after cooling down. (In case of Instant Shut Down, this setting is not saved.) Choose ON when using the projector mounted on the ceiling.

• The projector is in the stand-by mode when the lamp is off. Use the remote control to turn on the lamp.

AUTO POWER OFF ....................................Use to set the time elapsed before the projector enters the stand-by mode when there is no signal input from the source.

SPLASH SCREEN ......................................Choose ON to display the splash screen when the power is turned on.

BACK COLOR.................................Use to select the background from among BLUE and BLACK, which will be displayed when there is no signal input from the source.

LAMP MODE ..............................................Use to change the brightness of the lamp. When LOW is chosen, the lamp brightness is kept low and the projector operating noise is reduced, resulting in a longer lamp replacement interval.

• When the lamp mode is switched, the projected image may flicker. This is not a product malfunction.

• Do not change the setting of LAMP MODE frequently.

• When LAMP MODE has been set to LOW, the lamp mode changes from STANDARD to LOW about one minute after turn on.

IMAGE REVERSE ......................................Use to reverse the projected image. Select MIRROR for rear projection with the tabletop-mounted projector. Select MIRROR INVERT for front projection with the ceiling-mounted projector.

LAMP TIME.............................................The duration of illumination of a lamp converted in the Low mode is displayed.
3 FEATURE

MENU POSITION ............................................. Use to select the position of the menu on the screen, (upper left) or (lower right).

CINEMA MODE ............................................... When AUTO is selected, the film mode will be automatically activated when a film source signal is inputted. When OFF is selected, the film mode will not be activated.

ANAMORPHIC.................................................. Select ON when playing DVD discs containing data of widescreen images. This function is not available for HDTV.

PASSWORD..................................................... Use to change the mode of the password lock or to enable or cancel the password lock. See page 21 for details.

LANGUAGE ................................................... Use to select the language used in the menu. (ENGLISH / DEUTSCH / 日本語 / 中文 / FRANÇAIS / ESPAÑOL / PORTUGUÉS / ITALIANO / РУССКИЙ / 한국어).

RESET ALL.................................................... Use to reset the menu settings (except PASSWORD FUNCTION, and LANGUAGE).

Important:
- You can set the IMAGE, and SIGNAL menus only when the signal is supplied.

4 SIGNAL

HORIZ. POSITION ............................................ Use to adjust the horizontal position of the image.

VERT. POSITION ............................................. Use to adjust the vertical position of the image.

FINE SYNC .................................................... Use to synchronize the projector with the PC input signal or YCbCr/YPbPr so that the image is not blurred or not jittered.

TRACKING.................................................... Use to eliminate image noise such as wide stripes.

COMPUTER INPUT ......................................... The projector adjusts its settings automatically when connected to a DVD player equipped with a component video output (Y, Cb, Cr). When the projector is connected with a device having an RGB terminal, choose RGB manually.

SET UP ....................................................... When OFF is selected, the black area becomes make lighter. When 7.5% is selected, the black area becomes thicker.

Important:
- You can set the IMAGE, and SIGNAL menus only when the signal is supplied.
Image adjustment

You can adjust the image using the IMAGE menu.

### To control the white-to-black level of the image:
Adjust CONTRAST in the IMAGE menu. Press the ▶ button to increase the contrast and the ◄ button to reduce it.

### To control the light level of the image:
Adjust BRIGHTNESS in the IMAGE menu. Press the ▶ button to lighten the image and the ◄ button to darken it.

### To determine the intensity of the color:
Adjust COLOR in the IMAGE menu. Press the ▶ button to increase the amount of color in the image and the ◄ button to decrease it.

### To adjust the red-green color balance of the image:
Adjust TINT in the IMAGE menu. Press the ▶ button to increase the amount of purple in the image and the ◄ button to increase the amount of green in the image.

### To adjust the detail and clarity of the image:
Adjust SHARPNESS in the IMAGE menu. Press the ▶ button to sharpen the image and the ◄ button to soften the image.

---

**Color temperature**

1. Select COLOR TEMP. in the IMAGE menu.
2. Press the ◄ or ▶ button to select USER ▶.
3. Press the ENTER button.

4. Press the ▲ or ▼ button to select the desired item.
5. Press the ◄ or ▶ button to adjust the selected item.
6. Repeat steps 4 and 5 for optimum adjustment results.
7. Exit the menu by pressing the MENU button several times.
Adjustment of the image from the computer
This projector adjusts the format of the video signal supplied from the computer. However, sometimes images are not projected correctly owing to the type of the computer used. When the image from the computer isn’t projected correctly, press the AUTO POSITION button. (See page 14.) If the image isn’t projected correctly yet, adjust the image from the computer using the menu. In this menu, the setting value is not saved after turning off the projector or when unplugging the signal cable. This menu is prepared just for temporary use when AUTO POSITION does not work correctly for the current provided signal.

Simple adjustment method
1. Select HORIZ. POSITION in the SIGNAL menu.
2. Press the or button to adjust the horizontal start position (or the left side of the image).
3. Select TRACKING in the SIGNAL menu.
4. Press the or button to adjust the horizontal end position (or the right edge of the image).
5. Repeat steps 1 to 4 for optimum adjustment results.
6. Select VERT. POSITION in the SIGNAL menu.
7. Press the or button to adjust the vertical start position (or the upper edge of the image).

To move the image horizontally:
Adjust HORIZ. POSITION in the SIGNAL menu. Press the button to move the image to the left. Press the button to move the image to the right.

To move the image vertically:
Adjust VERT. POSITION in the SIGNAL menu. Press the button to move the image upward. Press the button to move the image downward.

When the image flickers or the image is out of focus:
Adjust FINE SYNC. in the SIGNAL menu.
Advanced feature

Still
To stop the motion in the image temporarily (or to display a still image):
Press the STILL button on the remote control.
- The image will freeze temporarily.

To resume the motion in the image:
Press any button on the remote control.

Important:
- Do not display a still picture for a long time because the afterimages may persist on the screen.

Page-up and page-down
You can control the computer to page-up and page-down the presentation data using the remote control. Switch the pages using the PAGE UP or DOWN button on the remote control.

Connection
To control the computer using the remote control, connect the projector with the computer as shown below.

- When it is connected via USB, the "Page up/down" function works on the computer which supports USB connection as a standard function. (But this function may not work via USB connection on any computer.)
- Wait for the lamp to light up before connecting the USB cable.
Password function
This projector is equipped with the password function that is designed for prevention of wrong operation by children and restriction on operation by other than specified users.

MENU ACCESS ...........All the buttons except for the POWER button on the projector are disabled. (The buttons on the remote control are enabled.) You can use this mode as a measure of prevention of wrong operation by children and restriction on operation by other than specified users.

To enable the password function:
1. Display the FEATURE menu.
2. Press the ▲ or ▼ button to select PASSWORD FUNCTION.
3. Press the ENTER button.
   • The screen for setting the password function will appear.
   • When the password has already been set, the mode won’t be changed. In such cases, press the ENTER button to cancel the password function and try again.
4. Press the ENTER button.
   • The screen for entering a password will appear.
5. Press the ▲ or ▼ button to select a number from 0 to 9.
6. Press the ENTER button.
   • You can set the next digit.
7. Repeat steps 5 and 6 to set a four-digit password.
8. Enter the password again for confirmation using the same steps.
9. When the last digit has been entered, the password set up is complete and the password menu will be off.
   • If the entered passwords don’t match, it will jump to the INPUT PASSWORD field to start over again.
   • To cancel the procedure, select Exit and press the ENTER button.
   • You can cancel the procedure by pressing the MENU button alternatively.

Important:
• If you forget your password, keep pressing the MENU and ENTER buttons on the control panel at the some time about three seconds to cancel the password function.

To cancel the password function:
1. Display the FEATURE menu.
2. Press the ▲ or ▼ button to select PASSWORD FUNCTION.
3. Press the ENTER button.
   • The screen for canceling the password function will appear.
4. Press the ENTER button.
   • The screen for entering the password will appear.
5. Press the ▲ or ▼ button to select a number from 0 to 9.
6. Press the ENTER button.
   • You can set the next digit.
7. Repeat steps 5 and 6 to enter the four-digit password.
8. When the last digit has been entered, the password set up is complete and the password menu will be off.
   • If the entered passwords don’t match, it will jump to the INPUT PASSWORD field to start over again.
   • To cancel the procedure, select Exit and press the ENTER button.
   • You can cancel the procedure by pressing the MENU button alternatively.
Lamp replacement

When the lamp no longer functions, replace it with a new one.

Caution:
- Do not remove the lamp immediately after using the projector. You may get burned because the lamp very hot after use.
- Before replacing the lamp, press the POWER button to turn off the lamp and wait for two minutes for lamp to cool down. Unplug the power cord from wall outlet and wait one hour for the lamp to cool down completely.
- Do not remove the lamp except for replacement. Careless handling can cause injury or fire.
- Do not touch the lamp directly. It may break and cause injury or burn.
- Be sure not to drop the lamp lid screw into the projector. Also be sure not to put metal or any flammable objects inside because it may cause fire or electric shock. If any objects should fall inside, unplug and contact your dealer.
- Install the lamp securely to prevent failure and fire.
- If the lamp should break, small glass fragments may fall out through the grilles and some may remain inside of the projector or the lamp box. When taking the lamp box out, be sure to turn over the projector and hold the handle of the lamp box to avoid injury due to the glass fragments.
- If the lamp should break, never shake the lamp box or hold it in front of your face after removing it. The glass fragments may fall out and cause injury to your eyes.
- When placing the projector upside down to replace the lamp or conduct maintenance, ensure that the projector is securely placed before working with it.
- Be sure to use the lamp exclusive to this projector, VLT-XD206LP. Use of other lamps may cause a failure of the projector.

1. Reverse the projector gently.
2. Loosen the screws (a) using a Phillips screwdriver (+), and remove the lamp cover (b).
3. Loosen the screws (c) using a Phillips screwdriver (+).
4. Pull up the handle.
5. Pull out the lamp box by the handle while holding the projector.
   - Pull the lamp box out of the projector slowly. If it is pulled out quickly, the lamp may break scattering glass fragments.
   - Do not spill liquid on the removed lamp box or do not place it near any flammable object or where children can reach to prevent injury or fire.
6. Load a new lamp box securely into the projector in the right orientation.
7. Put the handle back to the original position.
   - Make sure that the handle is locked.
8. Tighten up the screws (c) using a Phillips screwdriver (+).
9. Tighten up the screw (a) using a Phillips screwdriver (+) to secure the lamp cover.

Reset of the lamp operation time
Plug in the power cord, and reset the lamp operation time by keep pressing the ▼, ▼, and POWER buttons on the control panel at the same time about 5 seconds.

Important:
- Unless these three buttons are pressed at the same time, the lamp operation time isn’t reset.
- Make sure that the STATUS indicator is lit once (red) and the lamp operation time is reset successfully.
- The projector doesn’t turn on if the lamp cover isn’t attached securely.
- Be sure to reset the lamp operation time whenever you replace the lamp.
- Do not reset the lamp operation time unless you replace the lamp.

Caution:
- The lamp is fragile. If it is broken, be careful not to cut yourself with glass fragments.
- Contact your dealer for a new lamp.
- The lamp in this product contains mercury. Please dispose of properly.

Interval of lamp replacement
When the lamp operation time exceeds the time elapsed*1, the POWER LED will light green and STATUS LED will blink red. In this case, replace the lamp immediately.

<table>
<thead>
<tr>
<th>Model</th>

</tr>
</thead>
<tbody>
<tr>
<td>XD206U/G</td>
<td>2850 Hours</td>
</tr>
<tr>
<td></td>
<td>3000 Hours*3</td>
</tr>
</tbody>
</table>

The times above are when LAMP MODE of the INSTALLATION menu is set to LOW. When it is set to STANDARD, this duration will be shortened.

Caution:
- This projector uses a lamp that contains mercury. Disposal of the lamp or the projector with the lamp may be regulated due to environmental considerations. For disposal or recycling information, please contact your local authorities or the Electronic Industries Alliance: www.eiae.org. (For US only).
## Troubleshooting

The following offers solutions to some of the common problems you may encounter. We suggest that you consult this chart before contacting your dealer.

### Images aren't projected on the screen.

<table>
<thead>
<tr>
<th>Problem</th>
<th>Cause and solution</th>
</tr>
</thead>
<tbody>
<tr>
<td>Images aren't projected on the screen.</td>
<td>- Check the states of the indicators.</td>
</tr>
<tr>
<td></td>
<td><strong>POWER</strong></td>
</tr>
<tr>
<td></td>
<td>Off</td>
</tr>
<tr>
<td></td>
<td>Steady green</td>
</tr>
<tr>
<td></td>
<td>Steady green</td>
</tr>
<tr>
<td></td>
<td>Steady green</td>
</tr>
<tr>
<td></td>
<td>Off</td>
</tr>
<tr>
<td></td>
<td>N/A</td>
</tr>
</tbody>
</table>

### The power is turned off.

- This condition may occur when an inlet or an outlet is blocked.
  - If this is the case, the STATUS indicator lights red.
  - Remove the object which blocks the inlet or outlet, and then perform the following operations.
    1. Wait until the air inlet/outlet fan stops (until the STATUS indicator turns off.)
    2. Disconnect the power plug from the power outlet.
    3. Wait 10 minutes or longer.
    4. Connect the power plug to the power outlet.
    5. Press the power button.
- If the STATUS indicator illuminates in red, it indicates the lamp should be exchanged. Exchange the light source lamp.
- Check whether or not the "Auto power off" function is set.
- Check whether or not the lifetime indicator of the lamp illuminates.
- A degraded lamp may illuminate, and go out after a while.

### Images suddenly disappear.

- The air inlet or outlet grille may be blocked. (In such cases, the STATUS indicator lights red.)
  - Remove the objects blocking the air inlet or outlet grille and carry out the following.
    1. Wait for the air inlet or outlet fan to stop (or wait for the STATUS indicator to go out.)
    2. Unplug the power cord from the wall outlet.
    3. Wait about 10 minutes.
    4. Plug the power cord into the wall outlet.
    5. Press the POWER button.
- When the STATUS indicator is blinking red, it is indicating that the lamp should be replaced. Replace the lamp in this case.

### No images (Blue back)

- Turn on the power of the connected device, or check whether there is something wrong with the connected device.
- Check whether the external device outputs signals. (Check this especially when the external device is a notebook computer.)
- Check that the cable connected to the external device isn't defective.
- Check that the projector is connected to the external device using the correct terminals.
- Check that the connected device is correctly selected as the input source.
- When an extension cord is being used, replace it with the supplied cable and check whether images are projected correctly. If images are projected correctly, use an RGB signal amplifier along with the extension cord.
## Troubleshooting (continued)

### Images aren't projected correctly.

<table>
<thead>
<tr>
<th>Problem</th>
<th>Cause and solution</th>
</tr>
</thead>
</table>
| Projected images are shaking. | - Check that the cable connected to the external device isn't intermittent.  
- Connect the cable's plug with the external device's connector firmly.  
- Press the AUTO POSITION button.  
- Some computers output out-of-spec signals on rare occasion. Adjust the SIGNAL menu. (See page 19.) |
| Projected images are displaced. | - Adjust the projector and the screen so that they are perpendicular to each other. (See page 12.) |
| Projected images are distorted. | - Adjust BRIGHTNESS in the IMAGE menu. (See page 18.)  
- Replace the lamp. (See page 22.)  
- Remove the lens cap.  
- Check SET UP function in Signal menu. |
| Projected images are dark. | - Adjust the focus. (See page 13.)  
- Clean the lens.  
- Remove the lens cap.  
- Adjust BRIGHTNESS and CONTRAST in the IMAGE menu. (See page 18.)  
- Adjust the projector and the screen so that they are perpendicular to each other. (See page 12.) |
| Projected images are blurred. | - Connect the cable's plug with the external device's connector firmly.  
- Keep the projector away from equipment generating interfering radio waves.  
- When the keystone adjustment is carried out, the image may not be displayed correctly because of the type of input signal. This isn't a product malfunction. In this case, readjust the keystone so that the amount of keystone correction is as small as possible. |
| White dots are seen on projected images.  
Black dots are seen on projected images. | - This symptom is normal for a DLP projector and is not a malfunction. (A very small number of pixels may stay lit or out, but such symptom is not a malfunction. Pixels of 99.99% or more are effective.) |
| Rainbow blur appears in projected images. | - This is due to color breaking noise that occurs in a DLP system and is not a malfunction. |
| Fine streak pattern appears in projected images. | - It occurs because of interference with the screen and isn’t a product malfunction. Change the screen or readjust the focus of the projector. |
| Projected images (and/or audio) appear wavy and distorted. | - Connect the cable's plug with the external device's connector firmly.  
- Keep the projector away from equipment generating interfering radio waves.  
- When the keystone adjustment is carried out, the image may not be displayed correctly because of the type of input signal. This isn’t a product malfunction. In this case, readjust the keystone so that the amount of keystone correction is as small as possible.  
- Match the output resolution of your computer with the resolution of the projector. For the method to change the output resolution of the computer, contact the manufacturer of your computer. (See page 29.)  
- Some images and texts appear obscured during the keystone adjustment. In such cases, use the projector without applying the keystone adjustment. (See page 12.) |
| Tint in projected images is incorrect. | - Check that COMPUTER INPUT in the SIGNAL menu is correctly set. (See page 17.)  
- Check that the cable connected to the external device isn't broken. |
| Color shade looks different. | - The color shade between several equipment may differ depending on the types of optical parts, however, it does not indicate a malfunction.  
- Colors may look different from those on the TV or on a display of a personal computer, however, it is due to differences in the range of color reproduction, and is not a malfunction. |
| Only the motion areas in the images supplied from the computer aren’t displayed. | - This is caused by the computer being used. Contact the manufacturer of your computer. |
| Projected images are obscured. | - Match the output resolution of your computer with the resolution of the projector. For the method to change the output resolution of the computer, contact the manufacturer of your computer. (See page 29.)  
- Some images and texts appear obscured during the keystone adjustment. In such cases, use the projector without applying the keystone adjustment. (See page 12.) |
When the problems below occur after the lamp is replaced, check the following.

<table>
<thead>
<tr>
<th>Problem</th>
<th>Cause and solution</th>
</tr>
</thead>
<tbody>
<tr>
<td>Hot air is emitted from the air outlet grilles.</td>
<td>• This air comes out as a result of cooling the inside of the projector. This isn’t a product malfunction.</td>
</tr>
<tr>
<td>No audio is output.</td>
<td>• Check that the volume isn’t set to low.</td>
</tr>
<tr>
<td>Sound cannot be heard from the external audio output (*Only applicable to the models which have the external audio output.)</td>
<td>• Check whether or not the volume is turned down.</td>
</tr>
<tr>
<td>The menu can’t be used.</td>
<td>• The microcomputers inside the projector may be wrongly operating because of noise. ➔ Press the POWER button to turn off the lamp and unplug the power cord from the wall outlet. Wait about 10 minutes, plug the power cord in, and try again.</td>
</tr>
<tr>
<td>The remote control doesn’t function easily or at all.</td>
<td>• Check that the battery is loaded in the remote control or the battery isn’t weak. (See page 8.) • Check that the remote control sensor isn’t exposed to direct sunlight or fluorescent light. (See page 8.) • Use the remote control within its operation range. (See page 8.) • Use the remote control at least 10 cm away from the projector.</td>
</tr>
<tr>
<td>The buttons on the control panel (except for the POWER button) don’t function.</td>
<td>• The password function is working. ➔ Cancel the password lock. (See page 21.)</td>
</tr>
<tr>
<td>Abnormal sound is heard.</td>
<td>• Because the color wheel spins at a high speed, metallic sounds may be heard in rare occasions. Such symptom is not a malfunction.</td>
</tr>
<tr>
<td>The power isn’t turned on.</td>
<td>• Attach the lamp cover on the bottom correctly. • Reset the lamp operation time. (See page 22.)</td>
</tr>
<tr>
<td>The STATUS indicator blinks.</td>
<td>• Reset the lamp operation time. (See page 22.)</td>
</tr>
</tbody>
</table>

**Maintenance**

**Warning:**
Do not use flammable solvents (benzene, thinner, etc.) and flammable aerosols when cleaning the projector body and lens. Flammable substances may ignite causing fire or breakdown while the lamp is illuminating.

**Caution:**
Be sure to turn off the lamp and unplug the power cord from the wall outlet before you perform any maintenance on the projector.

**Cleaning of the projector and the ventilation slots**
Use a soft cloth to clean the projector and the ventilation grilles. When the grilles become dirty, wipe them with a soft cloth dampened with diluted mild detergent, and then wipe them with a dry cloth.

**To protect the surface of the projector from fading or deteriorating:**
• Do not spray insecticide on or inside the projector.
• Do not use benzine or thinner to clean it.
• Do not let rubber or plastic materials contact with projector.

**Cleaning of the lens**
Use a standard lens-cleaning brush or a piece of lens tissue dampened with lens cleaning fluid. The lens surface is fragile. Use only recommended, nonabrasive lens-cleaning materials. Do not touch the lens with your fingers.
Indicators

This projector has two indicators, each of which shows the operation condition of the projector. The following offer solutions to possible problems. If these problem persist, turn the projector off and consult your dealer.

Dimensional drawings (unit : mm)

What's included in the box

- 1 RGB cable for PC 02552-0072-00 1 Remote control
- 1 VIDEO cable 02552-0068-00 1 Safety manual/Quick start up
- AC power cord 1 CD-ROM
- (XD206U) either for US 02552-0063-01 2 Battery
- or for EU 02552-0066-01 1 Lens cap
- or for UK 02552-0068-01 1 Soft case
- (XD206U-G) for US 246C483-10

Replacement part

(Optional / Not included in the box)

Spare lamp VLT-XD206LP
Important:

- Some computers are not compatible with the projector.
- The projector’s maximum resolution is 1024 x 768 pixels. It may not display images of higher resolutions than 1024 x 768 correctly.
- Image with SYNC on G (Green) signal like 1080I may jitter. In this case, adjust FINE SYNC in the signal menu.
- Images with SYNC on G (Green) signal may be tinged with green.
- If the resolution and frequency of your computer aren’t shown on the table, find the compatible resolution and frequency by changing the resolution of your computer.

Set COMPUTER INPUT in the SIGNAL menu to RGB when inputting the HDTV signal as RGB signal.

TV60 and TV50 are equivalent to 480I and 576I respectively. When these signals are supplied to the VIDEO or S-VIDEO signal, the signal mode is indicated as TV60 or TV50. When they are supplied to the COMPONENT terminal, the signal mode is indicated as 480I or 576I.

MONITOR OUT terminal is not available for SYNC on G (Green) signal.

The component signal is only available for an output connector for 3-line fitting.

480I and 576I are indicated as a component signal. (RGB is not available.)
